## Project Overview

ComicCraft is an AI Comic Story Creator documented as a FastAPI + Jinja2 application using Gemini, image-generation backends, and PDF export. The system accepts a story idea and preferences, creates a structured five-panel comic, generates illustrations, displays a preview, and exports the finished comic as a PDF.

## Main Features

- Accepts story prompt, main character name, setting, story tone, and art style.
- Creates a coherent five-panel outline.
- Expands the outline into captions, narration, and dialogue.
- Generates one illustration for each panel.
- Builds a comic layout and exports it as PDF.
- Provides web pages and JSON APIs.
- Includes a deterministic demo mode for testing without API keys.

## Technology

The documented project uses FastAPI, Jinja2, Gemini through the Google GenAI SDK, Hugging Face image generation, optional local Diffusers, Pillow, FPDF2, Pydantic, and pytest.
