Team Member	Role
Joseph Thomas	Team Leader
Sugeeve Raj	Team Member
Mathew Ebidon	Team Member
Bala Murugan S	Team Member
Divya Dharshini	Team Member

Windows Setup

- Open the extracted ComicCraft folder in VS Code.
- Open Terminal → New Terminal.
- Create the environment using: python -m venv .venv
- Activate it using: .venv\Scripts\activate
- Install dependencies using: pip install -r requirements.txt
- Copy .env.example to .env.
- For the first local test, enable DEMO_MODE=true.
- Start the application with: uvicorn app.main:app --reload
- Open http://127.0.0.1:8000 in a browser.

Creating a Comic

- Enter the story prompt.
- Enter the main character name.
- Choose the setting.
- Choose the story tone.
- Choose the art style.
- Click Generate My Comic.
- Review the five-panel preview.
- Download the complete comic as a PDF.

API Documentation

When the application is running locally, FastAPI documentation is available at http://127.0.0.1:8000/docs. The health check is available at /health.

Real AI Mode

For real AI generation, the supplied README instructs the user to configure GEMINI_API_KEY and HF_TOKEN, set DEMO_MODE=false, and configure the desired Gemini and Hugging Face model IDs.
