Conclusion

ComicCraft provides an integrated workflow for turning a creative idea into a five-panel AI-assisted comic. The supplied implementation combines web input, structured story generation, image generation, browser preview, and PDF export.

Project Strengths

- Modular FastAPI service architecture.
- Structured five-panel output.
- Configurable AI and image-generation backends.
- Demo mode for testing without API credentials.
- Automated PDF export.
- Automated endpoint tests.

Future Scope

- Support panel counts beyond the documented five-panel workflow.
- Improve character consistency across generated images.
- Add more image-generation providers.
- Provide richer speech-bubble and comic-page layouts.
- Add user accounts and saved comic projects.
- Support additional export formats.

Source Basis

This document set is based on the supplied ComicCraft Full Source Code & Project Documentation. The documentation identifies the architecture as FastAPI + Jinja2 + Gemini + image generation + PDF export.
